

Build **voice and SMS** apps with **simple web APIs**

Tropo is a powerful yet simple API that adds Voice, SMS, Twitter, and IM support to the programming languages you already know.

Take advantage of our free developer platform and 24x7 support and start your app today.

TROPO

Tropo

Use popular web development languages to build powerful phone, SMS, IM and Twitter applications and run them on the world's largest VoIP cloud. Run your applications in the cloud or on your own servers.

Tropo AGIate

Run new or existing Asterisk apps on Tropo's voice cloud. AGIate is a bridge between the Asterisk Gateway Interface (AGI) and the Tropo cloud. No hosting hassles, and a feature set that includes easy provisioning of telephone, SIP and Skype numbers and speech recognition, SMS, and Instant Messaging.

Phono

Add a phone to your web page with jQuery. The Phono jQuery plugin lets you build phone and IM applications in a browser. Infinitely skinnable and simple to use, Phono turns JavaScript developers into telephony developers.

<http://phono.com/>

If you can build a web page, you can make a phone ring, send & receive SMS, and create an instant messaging bot.

Features

- Conferencing
- SMS
- Instant Messaging
- Call forward
- Speech recognition
- Call Recording
- Transcription
- Text to speech
- Audio playback
